DETAILED ACTION

Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claims 1-10, drawn to an apparatus for transferring a fluid.

Group II, claims 11-13, drawn to a method of transferring a fluid.

The inventions listed as Groups I and II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: These two grouping have the same technical feature but that technical feature is known in the art, specifically a two part syringe and the use of two part syringe.

During a telephone conversation with Conrad J. Clark on January 23, 2003 a provisional election was made with traverse to prosecute the invention of Group I, claims 1-10. Affirmation of this election must be made by applicant in replying to this Office action. Claims 11-13 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims **1-10** are rejected under 35 U.S.C. 102(e) as being anticipated by Lynn (USPN 5,769,825).

Lynn discloses a self contained syringe that comprises: an apparatus for transferring fluid to a sterile field which includes a first part and a second part separable from the first part (fig. 1), wherein the first part includes a cavity adapted to receive a first part of the syringe and allows communication with the syringe from outside the cavity (fig. 1), which second part is adapted to receive a second part of the syringe (fig. 1-5); the first part is adapted to receive a barred portion of the syringe and the second part is adapted to receive the plunger part of the syringe (fig. 1-5); the second part is a bellows or the second part is a thin flexible sheet (a bag) (fig. 17-18); the first part is adapted to receive only a part of the barrel and the second part is adapted to receive

Art Unit: 1743

the plunger and a part of the barrel (fig. 1-5); the second part comprises a means for releasable engagement of the plunger; releasable engagement comprises a clip or a disc with a slot for receiving an end of the plunger (fig 4a-4c reference 60 and 74);(fig. 1-5; 17-18; col. 1, line 64-col. 2, line 7; col.4 -col. 9; col. 11, line 62- col. 14, line 29; col. 15, lines 50-56).
